

OBDAutoDoctor Quick Start Guide for iPhone and iPad

FOR **WIFI** ADAPTERS

1. Locate the OBD-II diagnostics connector in your car

Search for 16-pin D-shaped connector that will match the adapter. The connector should be located in or near the dashboard close to the steering wheel. Typical place for the socket is the compartment under the driver's side dashboard.

2. Plug in the adapter

After you have located the diagnostic connector, plug in the adapter. Make sure the adapter is tightly attached but don't use too much force.

3. Turn ignition key to the 'ON' position or start the engine

The adapter should have some LEDs blinking. If the adapter has ON/OFF switch, make sure it is turned on.

4. Install OBDAutoDoctor from the App Store

Open the App Store and search for '**OBDAutoDoctor**' (by Creosys). Install the free app on your device.

5. Connect to the adapter network

Navigate to your device's '**Settings**' -> '**Wi-Fi**'. Make sure Wi-Fi networking is turned on. Wait for your adapter to appear in the list of available networks. Tap the adapter network name and wait for the network connection to the adapter.

6. Launch and configure the app

First, launch OBDAutoDoctor app. Then, navigate to '**Extras**' tab. Select '**Connectivity**' from the list.

7. Verify OBD adapter settings

Enter the IP address and port number of your adapter. Refer to the adapter user manual for the correct values. The defaults work with most adapters.

ADAPTER	
	<input checked="" type="radio"/> WiFi <input type="radio"/> Bluetooth
IP address	192.168.0.10
Port	35000

8. Connect to the adapter and car

Navigate back from the settings to the '**Status**' tab. Tap the connect button at the top right corner of the view.

After a while the app should indicate that it's connected to the vehicle. If it doesn't connect, continue to the troubleshooting steps below.

Troubleshooting and support

First, please check the Frequently Asked Questions online from www.OBDAutoDoctor.com/faq.

Second, please try the following:

1. Make sure your car is OBD2 compliant (please check the FAQ).
2. Navigate to '**Extras**' tab, and select '**Help**'.
3. Proceed with the troubleshooting steps. If you want e-mail support from us, please do especially steps 2.1 and 2.2.
4. In addition, you might want to try selecting the OBD protocol manually from the app settings ('**Extras**' -> '**Connectivity**' -> '**OBD protocol**').
